

1. Tuya WIFI communication:
programming setting steps (see the figure below)

After entering WIFI settings:

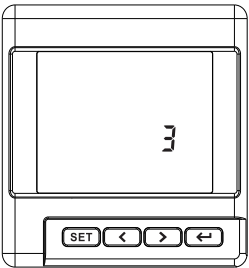

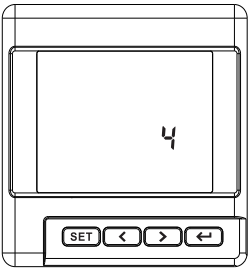

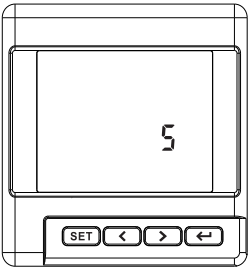

1. When the screen displays the number "8", click the "SET" button again to reset;
2. When the screen displays the number "0", it indicates the quick connection mode configuration status;
3. Click the "◀" button again to enter the Tuya APP networking settings;
4. When the screen displays the number "1", it means that it has entered the hotspot mode configuration state;
5. After opening the wireless and Bluetooth settings of your phone, enter the Tuya APP and search for the multi-function meter device icon(Product picture), click the meter icon to connect, and observe the changes in the numbers displayed on the multi-function meter screen. When the number displays "4", click the "↩" key to save and exit the settings.

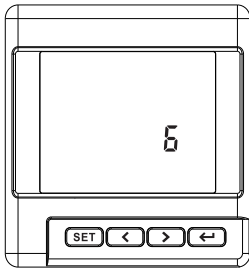

At this time, Tuya WIFI has been successfully connected, and the datas can be read normally on the TUYA software on the mobile phone.

Nnote: The above programming setting steps are for Tuya WIFI communication which behind the basic function, and the entire meter programming setting steps are basic functions + Tuya WIFI communication.
